IBD Plexus®
Proposal Submission Step by Step guide

STEP 1
Review the IBD Plexus Overview & Submission Guidelines and IBD Plexus Patient Data Specification.

STEP 2
Establish a research question that can be answered leveraging IBD Plexus resources.

STEP 3
Submit a Letter of Intent (LOI) through Proposal Central https://proposalcentral.altum.com/. Click on "Manage Proposals" tab and hit "Create New Proposal" button to submit the LOI.

STEP 4
Arrange a free one-on-one consultation with the IBD Plexus team to help develop your proposal. Researchers are strongly encouraged to seek support for proposal development in advance of the proposal submission. The purpose of the consultation is to guide understanding of the IBD Plexus data and biosamples in order to submit a well-informed proposal to streamline the submission/review process.

STEP 5
Once LOI is approved, you will receive an email notification from Proposal Central to submit a full proposal.

The following documents will need to be attached to your proposal within *Proposal Central*:

- A cover letter stating the overall purpose and rationale of the proposed research study.
- NIH format biosketches of the PI
- Lay Summary
- A study proposal not to exceed 6 single-spaced pages that provides the hypothesis, specific aims, rationale, design, and analysis plan for the data and/or biosamples. Additionally, a general statement of project impact is also required.

Note: Additional details may be requested from the investigators based on the initial review by the IBD Plexus Project Selection Committee.
